Control Panels

A router is only as good as it's control system.

A good control system is reliable, yet flexible enough to allow the switcher to be controlled in a variety of ways. A solid control system will allow the use of a large number of different control panels, as well as third-party controllers and automation systems. The SVS control system gives you all of that, and more.

From simple push-button control panels to fully programmable panels customized to your individual installation, Sierra Video offers a panel for every application. Our software solutions include our intuitive TyLinx Router Control Software, our G.R.I.P. Router Setup Software, and GRIPNet, the companion software that expands your control capabilities to the network level.

Our protocol is supported by nearly all of the third-party controller and automation suppliers, including the "e-Control internet appliance from Crestron Electronics and the icon-based "software" from Buf Technologies.

The Sierra Video control system gives you the flexibility and control options you need, no matter what your application.
